SAFETY NOTICE

This manual has been prepared as a guide to correctly service and repair some 2001 Ski-Doo snowmobiles. See model list below.

This edition was primarily published to be used by snowmobile mechanical technicians who are already familiar with all service procedures relating to Bombardier made snowmobiles. Mechanical technicians should attend continuous training courses given by Bombardier Training Dept.

Please note that the instructions will apply only if proper hand tools and special service tools are used.

This *Shop Manual* uses technical terms which may be slightly different from the ones used in the *Parts Catalog*.

It is understood that this manual may be translated into another language. In the event of any discrepancy, the English version shall prevail.

The content depicts parts and/or procedures applicable to the particular product at time of writing *Service* and *Warranty Bulletins* may be published to update the content of this manual. Make sure to read and understand these.

In addition, the sole purpose of the illustrations throughout the manual, is to assist identification of the general configuration of the parts. They are not to be interpreted as technical drawings or exact replicas of the parts.

The use of Bombardier parts is most strongly recommended when considering replacement of any component. Dealer and/or distributor assistance should be sought in case of doubt.

The engines and the corresponding components identified in this document should not be utilized on product(s) other than those mentioned in this document.

Torque wrench tightening specifications must be strictly adhered to. Locking devices (ex.: locking tab, self-locking fasteners, etc.) must be installed or replaced with new ones. If the efficiency of a locking device is impaired, it must be renewed.

This manual emphasizes particular information denoted by the wording and symbols:

↑ WARNING

Identifies an instruction which, if not followed, could cause serious personal injury including possibility of death.

CAUTION: Denotes an instruction which, if not followed, could severely damage vehicle components.

NOTE: Indicates supplementary information needed to fully complete an instruction.

Although the mere reading of such information does not eliminate the hazard, your understanding of the information will promote its correct use. Always use common shop safety practice.

Bombardier Inc. disclaims liability for all damages and/or injuries resulting from the improper use of the contents. We strongly recommend that any services be carried out and/or verified by a highly skilled professional mechanic. It is understood that certain modifications may render use of the vehicle illegal under existing federal, provincial and state regulations.

MMR2001_039_00_02A.FM

WHAT'S NEW

WHAT'S NEW

INTRODUCTION

• Procedure to change self-locking fasteners.

CARBURETOR AND FUEL PUMP

- Procedure to check DPM manifold for leaks.
- New pilot screw adjustment on GT SE.

STEERING SYSTEM

• Ski alignment specifications.

IV MMR2001_039_00_02A.FM

This *Shop Manual Volume 2* covers the following Bombardier made 2001 snowmobiles:

ARRANGEMENT OF THE MANUAL

The manual is divided into 11 major sections:

01 SERVICE TOOLS AND SERVICE PRODUCTS

02 LUBRICATION AND MAINTENANCE

03 TROUBLESHOOTING

04 ENGINE

05 TRANSMISSION

06 ELECTRICAL

07 REAR SUSPENSION

08 STEERING/FRONT SUSPENSION

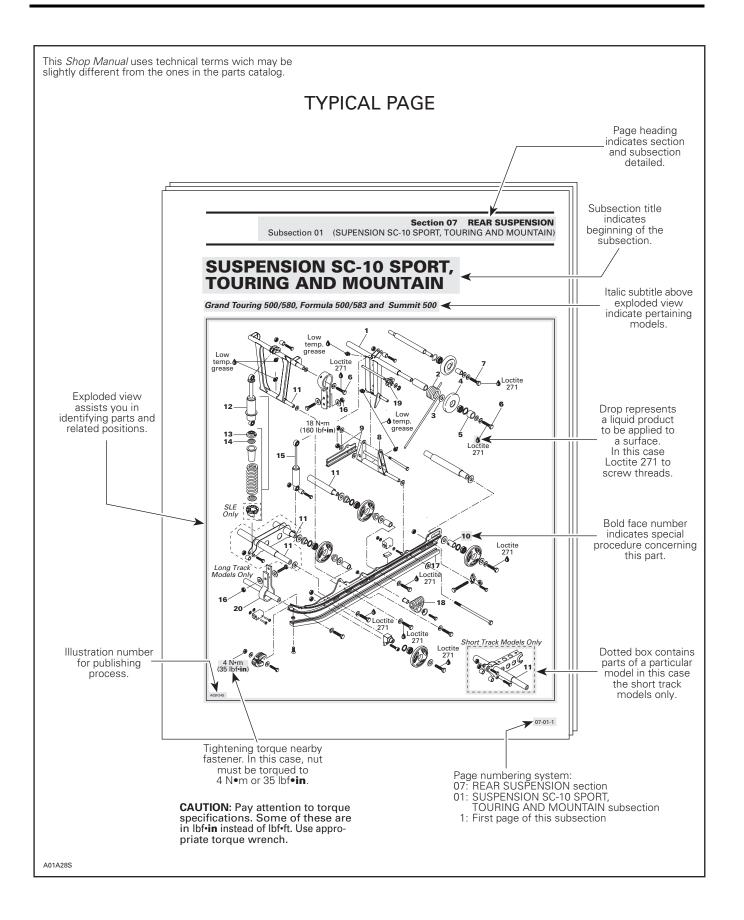

09 BODY/FRAME

10 TECHNICAL DATA

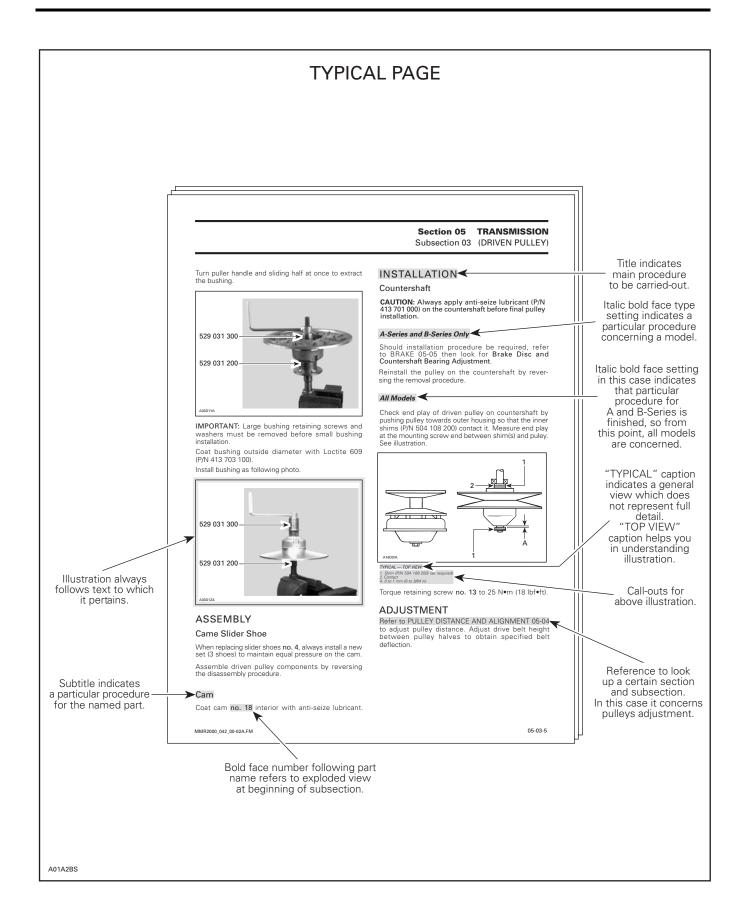

11 WIRING DIAGRAMS

Each section is divided in various subsections, and again, each subsection has one or more division.

MMR2001_039_00_02A.FM

GENERAL INFORMATION

The information and component/system descriptions contained in this manual are correct at time of publication. Bombardier Inc. however, maintains a policy of continuous improvement of its products without imposing upon itself any obligation to install them on products previously manufactured.

Due to late changes, it may have some differences between the manufactured product and the description and/or specifications in this document.

Bombardier Inc. reserves the right at any time to discontinue or change specifications, designs, features, models or equipment without incurring obligation.

USEFUL PUBLICATIONS

Refer to Parts Catalogs to order the right parts.

PARTS CATALOG		
MODELS	P/N	
MACH Z	484 400 173	
GRAND TOURING SE	484 400 183	

Use *Specification Booklet* to find rapidly the right specs.

1997-2001 SPECIFICATION BOOKLET (P/N 484 300 198).

ILLUSTRATIONS AND PROCEDURES

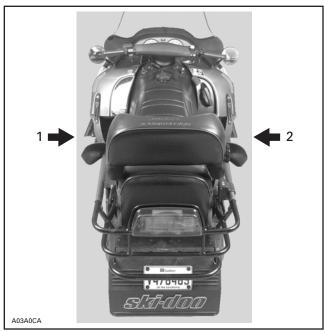

Illustrations and photos show the typical construction of the different assemblies and, in all cases, may not reproduce the full detail or exact shape of the parts shown. However, they represent parts which have the same or a similar function.

CAUTION: Most components of those vehicles are built with parts dimensioned in the metric system. Most fasteners are metric and must not be replaced by customary fasteners or vice versa. Mismatched or incorrect fasteners could cause damage to the vehicle or possible personal injury.

As many of the procedures in this manual are interrelated, we suggest, that before undertaking any task, you read and thoroughly understand the entire section or subsection in which the procedure is contained.

A number of procedures throughout the book require the use of special tools. Before commencing any procedure, be sure that you have on hand all the tools required, or approved equivalents.

The use of RIGHT and LEFT indications in the text, always refers to driving position (when sitting on vehicle).

TYPICAL

- 1. Left
- 2. Right

SELF-LOCKING FASTENERS PROCEDURE

The following describes the most common application procedures when working with self-locking fasteners.

Use a metal brush or a screwtap to clean the hole properly then use a solvent (Methyl-Chloride), let act during 30 minutes and wipe off. The solvent utilization is to ensure the adhesive works properly.

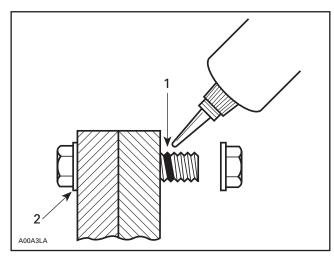

LOCTITE APPLICATION PROCEDURE

The following describes the most common application procedures when working with Loctite products.

NOTE: Always use proper strength Loctite product as recommended in this *Shop Manual*.

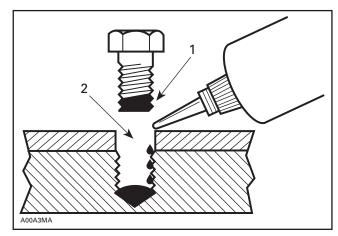

THREADLOCKER

Uncovered Holes (bolts and nuts)

- Apply here
 Do not apply
- 1. Clean threads (bolt and nut) with solvent.
- 2. Apply Loctite Primer N (P/N 293 800 041) on threads and allow to dry.
- 3. Choose proper strength Loctite threadlocker.
- 4. Fit bolt in the hole.
- 5. Apply a few drops of threadlocker at proposed tightened nut engagement area.
- 6. Position nut and tighten as required.

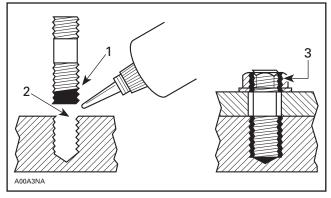

Blind Holes

- On threads
- 2. On threads and at the bottom of hole

- 1. Clean threads (bolt and hole) with solvent.
- 2. Apply Loctite Primer N (P/N 293 800 041) on threads (bolt and nut) and allow to dry for 30 seconds.
- 3. Choose proper strength Loctite threadlocker.
- 4. Apply several drops along the threaded hole and at the bottom of the hole.
- 5. Apply several drops on bolt threads.
- 6. Tighten as required.

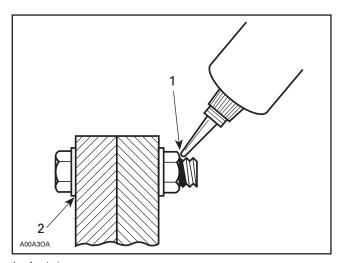

Stud in Blind Holes

- On threads
- On threads and in the hole
- Onto nut threads
- 1. Clean threads (stud and hole) with solvent.
- 2. Apply Loctite Primer N (P/N 293 800 041) on threads and allow to dry.
- 3. Put several drops of proper strength Loctite threadlocker on female threads and in hole.
- 4. Apply several drops of proper strength Loctite on stud threads.
- 5. Install stud.
- 6. Install cover, etc.
- 7. Apply drops of proper strength Loctite on uncovered threads.
- 8. Tighten nuts as required.

ΧI MMR2001_039_00_02A.FM

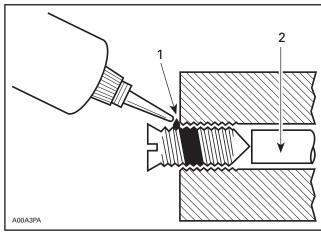

Preassembled Parts

- Apply here
 Do not apply
- 1. Clean bolts and nuts with solvent.
- 2. Assemble components.
- 3. Tighten nuts.
- 4. Apply drops of proper strength Loctite on bolt/nut contact surfaces.
- 5. Avoid touching metal with tip of flask.

NOTE: For preventive maintenance on existing equipment, retighten nuts and apply proper strength Loctite on bolt/nut contact surfaces.

Adjusting Screw

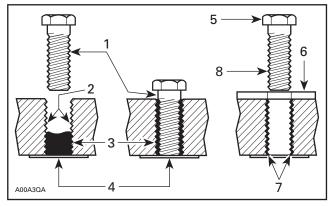

- Apply here
- 2. Plunger
- 1. Adjust screw to proper setting.
- 2. Apply drops of proper strength Loctite threadlocker on screw/body contact surfaces.
- 3. Avoid touching metal with tip of flask.

NOTE: If it is difficult to readjust, heat screw with a soldering iron (232°C (450°F)).

STRIPPED THREAD REPAIR

Stripped Threads

- Release agent Stripped threads
- 3. 4. 5. Form-A-Thread
- Tape Cleaned bolt
- Plate
- New threads
- Threadlocker

Standard Thread Repair

- 1. Follow instructions on Loctite FORM-A-THREAD 81668 package.
- 2. If a plate is used to align bolt:
 - a. Apply release agent on mating surfaces.
 - b. Put waxed paper or similar film on the surfac-
- 3. Twist bolt when inserting it to improve thread conformation.

NOTE: NOT intended for engine stud repairs.

Repair of Small Holes/Fine Threads

Option 1: Enlarge damaged hole, then follow Standard Thread Repair procedure.

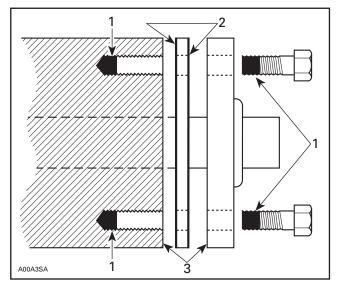

Option 2: Apply FORM-A-THREAD on the screw and insert in damaged hole.

Permanent Stud Installation (light duty)

- 1. Use a stud or thread on desired length.
- 2. DO NOT apply release agent on stud.
- 3. Do a Standard Thread Repair.
- 4. Allow to cure for 30 minutes.
- 5. Assemble.

GASKET COMPOUND

All Parts

- Proper strength Loctite
- Loctite Primer N (P/N 413 708 100) and Gasket Eliminator 515 (P/N 413 702 700) on both sides of gasket
 3. Loctite Primer N only
- 1. Remove old gasket and other contaminants with Loctite Chisel remover (P/N 413 708 500). Use a mechanical mean if necessary.

NOTE: Avoid grinding.

- 2. Clean both mating surfaces with solvent.
- 3. Spray Loctite Primer N on both mating surfaces and on both sides of gasket. Allow to dry 1 or 2 minutes.
- 4. Apply GASKET ELIMINATOR 515 (P/N 413 702 700) on both sides of gasket, using a clean applicator.
- 5. Place gasket on mating surfaces and assemble immediately.

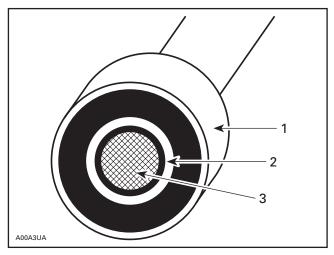

NOTE: If the cover is bolted to blind holes (above), apply proper strength Loctite in the hole and on threads. Tighten.

If holes are sunken, apply proper strength Loctite on bolt threads.

6. Tighten as usual.

MOUNTING ON SHAFT

Mounting with a Press

- Bearing
- Proper strength Loctite
- Prope
 Shaft

Standard

- 1. Clean shaft external part and element internal part.
- 2. Apply a strip of proper strength Loctite on shaft circumference at insert or engagement point.

NOTE: Retaining compound is always forced out when applied on shaft.

- 3. DO NOT use anti-seize Loctite or any similar prod-
- 4. No curing period is required.

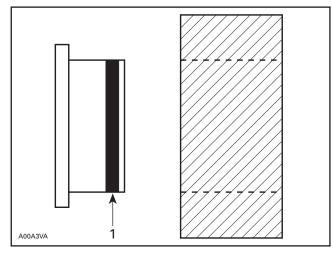

Mounting in Tandem

- 1. Apply retaining compound on internal element bore.
- 2. Continue to assemble as shown above.

XIII MMR2001_039_00_02A.FM

CASE-IN COMPONENTS

Metallic Gaskets

- 1. Proper strength Loctite
- 1. Clean inner housing diameter and outer gasket diameter.
- 2. Spray housing and gasket with Loctite Primer N (P/N 293 800 041).
- 3. Apply a strip of proper strength Loctite on leading edge of outer metallic gasket diameter.

NOTE: Any Loctite product can be used here. A low strength liquid is recommended as normal strength and gap are required.

- 4. Install according to standard procedure.
- 5. Wipe off surplus.
- 6. Allow it to cure for 30 minutes.

NOTE: Normally used on worn-out housings to prevent leaking or sliding.

It is generally not necessary to remove gasket compound applied on outer gasket diameter.

TIGHTENING TORQUES

Tighten fasteners to torque mentioned in exploded views and text. When they are not specified refer to following table. Bold face size (e.g. **M4**) indicates nominal value (mean value).
